Northbridge Bank - 2025 Spending Targets and Outlook

Prepared by Retail Analytics for the Executive Committee, January 2025.

1. Portfolio targets for 2025

Travel should represent less than 25 percent of total card spending by amount. No single merchant category should exceed 30 percent of total spending.

The average transaction amount for Savings accounts should stay below 110 CAD.

2. Outlook

Management expects Travel spending to peak in the summer months, June to August, following the usual seasonal pattern. Utilities spending is expected to be highest in winter.

3. Monitoring

Targets are checked quarterly against the transaction dataset. Any target that is missed must be explained in the next quarterly report, with the category, the actual figure and the target.

External factors such as interest rates and inflation should be noted when they help explain a missed target.
